# Content Requirements for the Battery Passport

**Dr. Johannes Simböck**

 **acatech – National Academy of Science and Engineering**

State of play and possible future developments of the DPP  
March 5th 2024

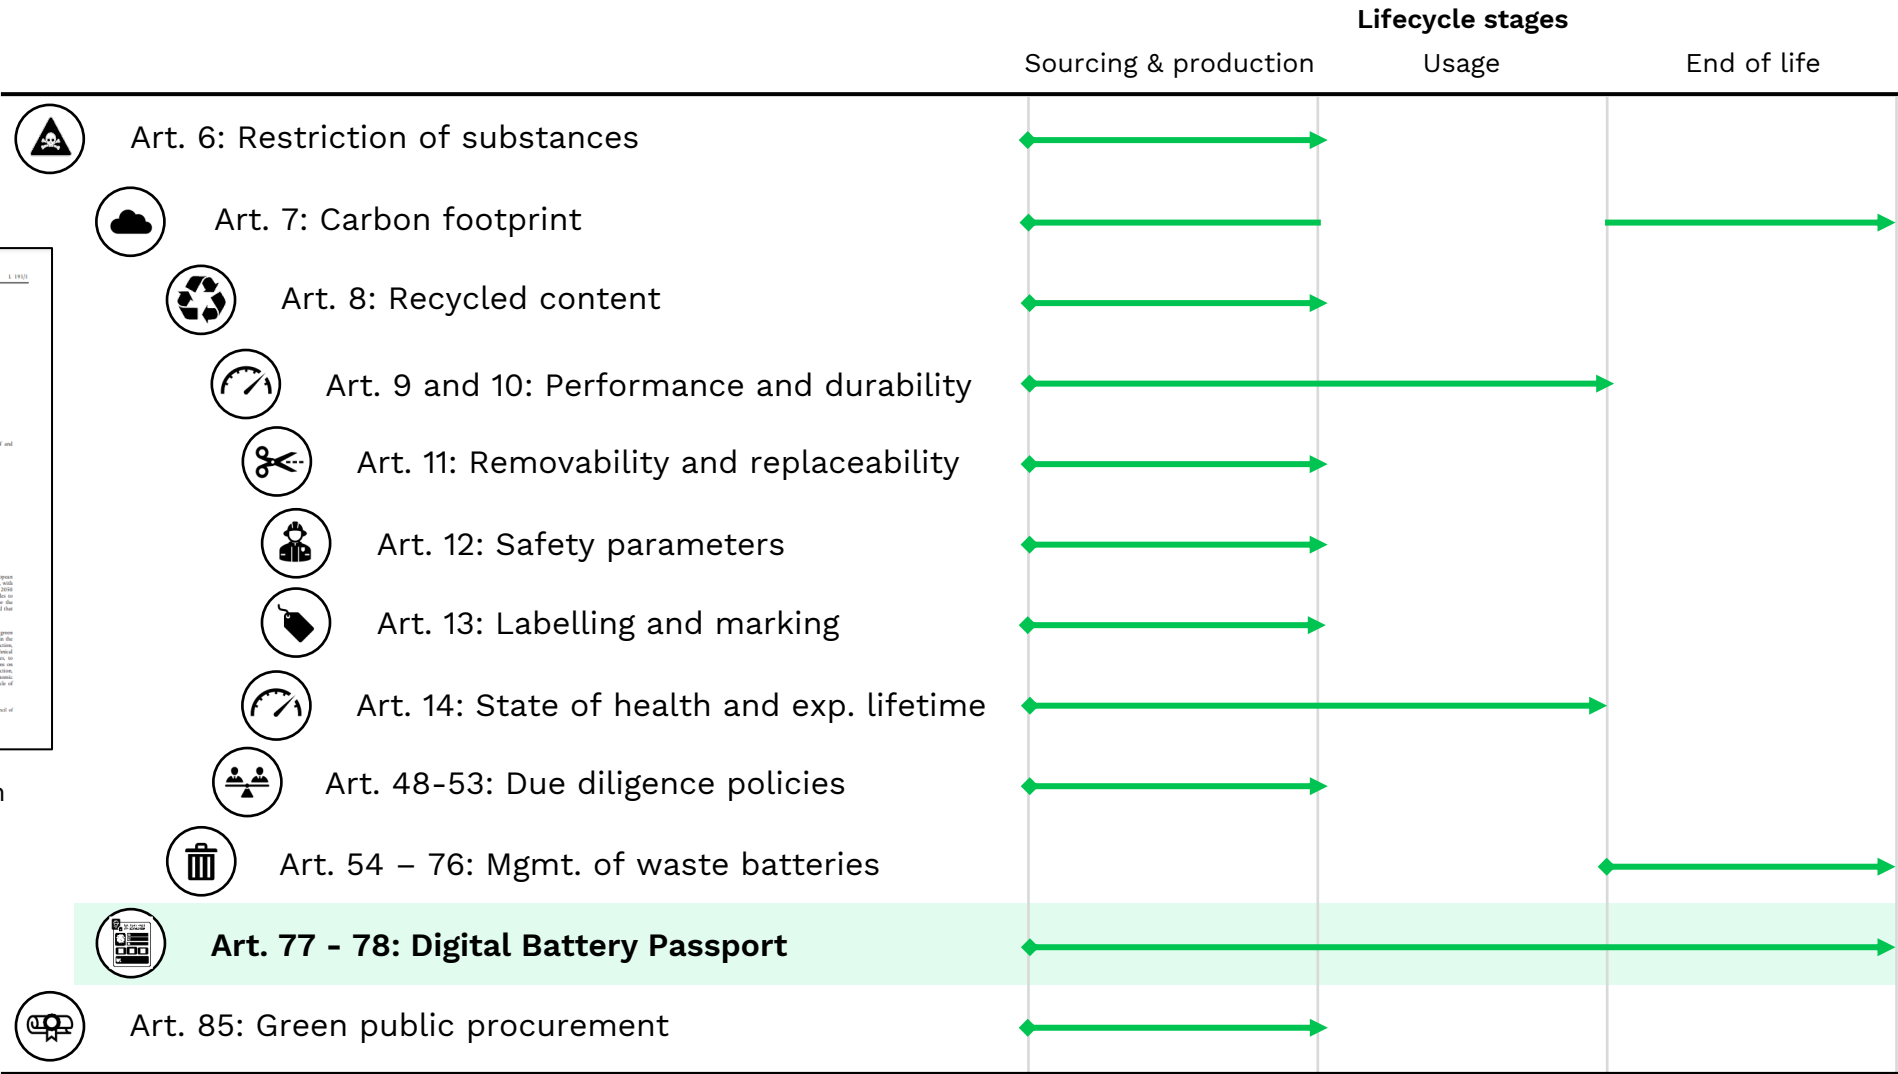

# Scope of the Battery Passport

# The battery passport is defined in Article 77 of the Battery Regulation and encompasses reporting requirements covering the entire battery life cycle

Not exhaustive

EU Battery Regulation

# The battery passport will be required for EV, LMT and industrial batteries > 2 kWh from February 2027 with the main responsibility lying with the “economic operator”

## Specifications for the battery passport

### Timeline

The battery passport will be required from 18 February 2027

### Scope

- Batteries in light means of transport (LMT)
- Industrial batteries with a capacity greater than 2 kWh
- Electric vehicle (EV) batteries

### Responsibility

The responsibility lies with the economic operator (or an authorized representative) placing the battery on the market

### Stakeholder Groups

- 1) The general public
- 2) Notified bodies, market surveillance authorities and the Commission
- 3) Any natural or legal person with a legitimate interest in accessing and processing that information

# Battery Passport content and system

outlined in the Battery Passport Content Guidance

# The Battery Regulation defines the mandatory scope of data attributes for the battery passport, with further recommendations made by the Battery Pass

## Battery Pass approach

### Battery Regulation

The EU Battery Regulation defines **all mandatory data attributes** to be made accessible via the battery passport.

### Further regulations

**Further regulations** serve as a source to:

- complement definitions,
- generate additional background information, and
- harmonise reporting requirements.

Scope was limited to **EU and key Member States** regulations to align with other (upcoming) requirements in the region, e.g., the Ecodesign for Sustainable Products Regulation (ESPR) and the German Supply Chain Act.

## Battery Pass objective and scope

Guidance on how to achieve **compliance with** the battery passport content requirements as mandated by **the EU Battery Regulation**.

## Recommendations how to:

...interpret the regulatory text

...harmonise with other regulations

...increase sustainability & circularity

More than 100 organizations from the broader Battery Pass network participated in a consultation webinar submitting more than 250 comments on the draft report during a feedback phase lasting around two months.

# The battery passport will contain a wide array of information

**Data categories for the battery passport** (select data attributes shown below)

Battery ID: 0101010

Battery passport ID: 1111010

Responsible economic operator

## General information

- Manufacturing info (identity, place, date)
- Battery category
- Battery weight
- Battery status

## Labels and certifications<sup>1</sup>

- Symbols and labels
- Meaning of labels & symbols
- Declaration of conformity
- Compliance of test results

## Carbon footprint

- Carbon footprint (5 metrics)
- Weblink to CF study
- CF performance class

## Supply chain due diligence

- Due diligence report

## Materials and composition

- Hazardous substances
- Battery chemistry
- Critical raw materials
- Materials used in cathode, anode, electrolyte

## Circularity & resource efficiency

- Recycled content shares
- Manuals for removal, disassembly, dismantling
- Component part numbers & spare parts information
- Safety measures/instructions

## Performance & durability

- Capacity, energy, power, SoH
- Expected lifetime
- Negative events

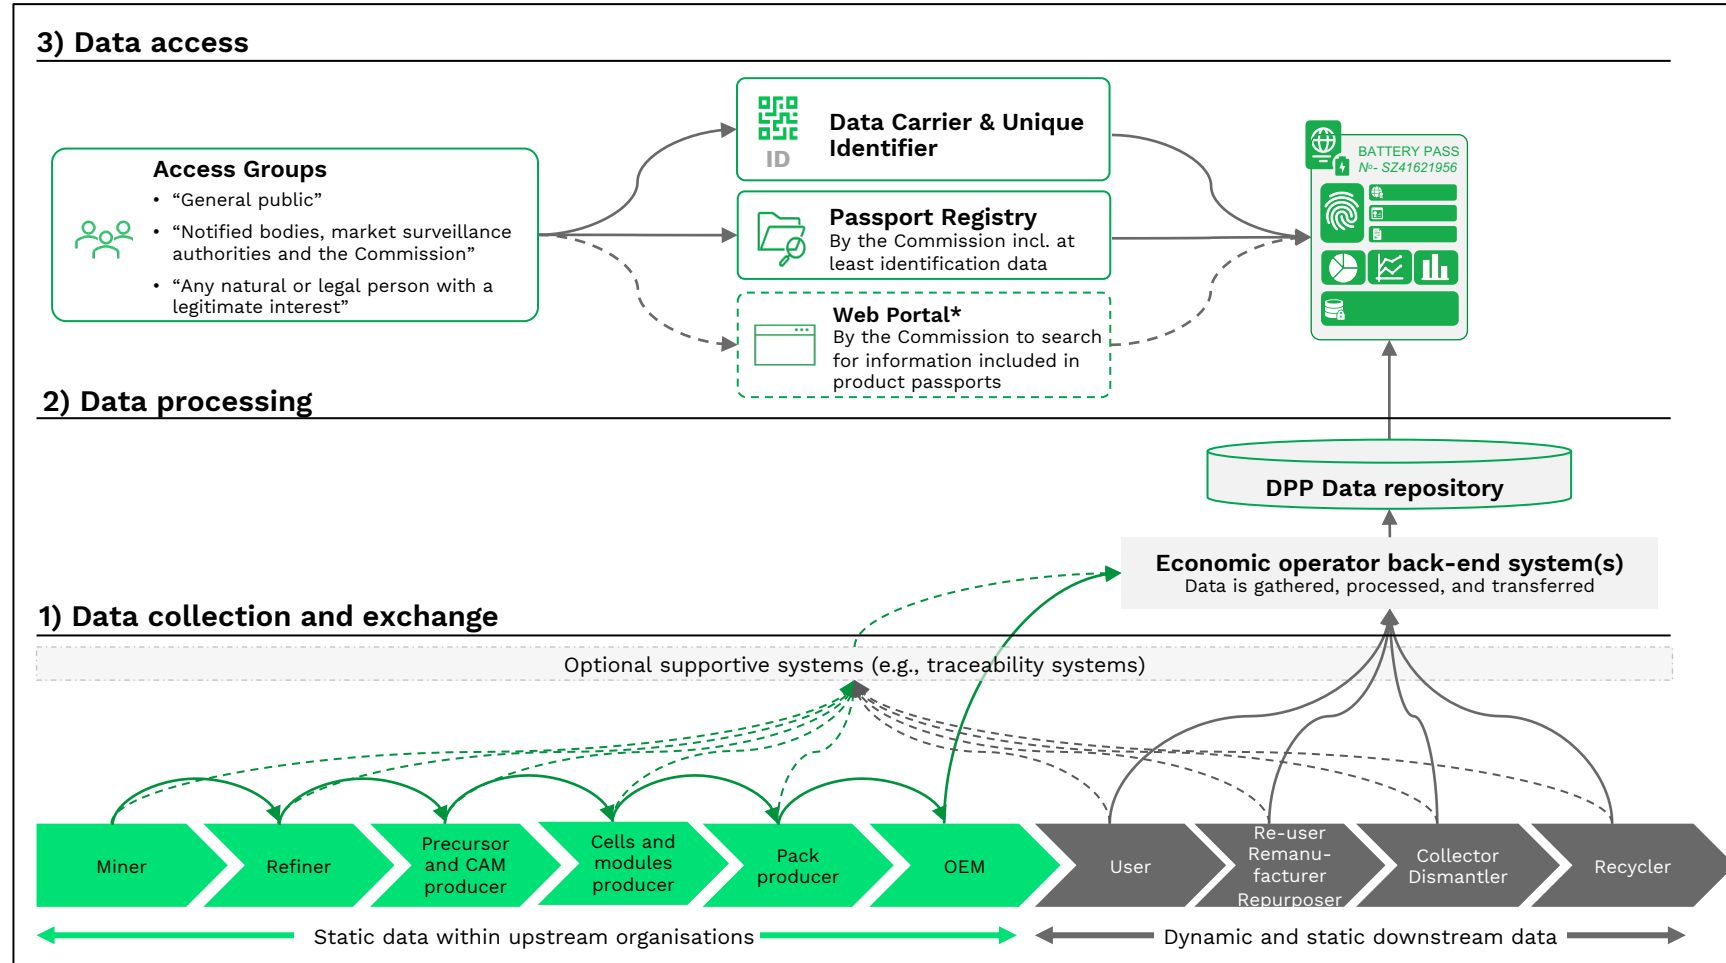

1) Labels and symbols are covered in section 5. „Battery materials and composition“ in the following. Information on compliance can be found in the main Guidance Document.

# The battery passport system relies on data collection, processing and providing access to the different stakeholder groups

3) Data is accessed from product passport by pre-defined groups based on respective access rights

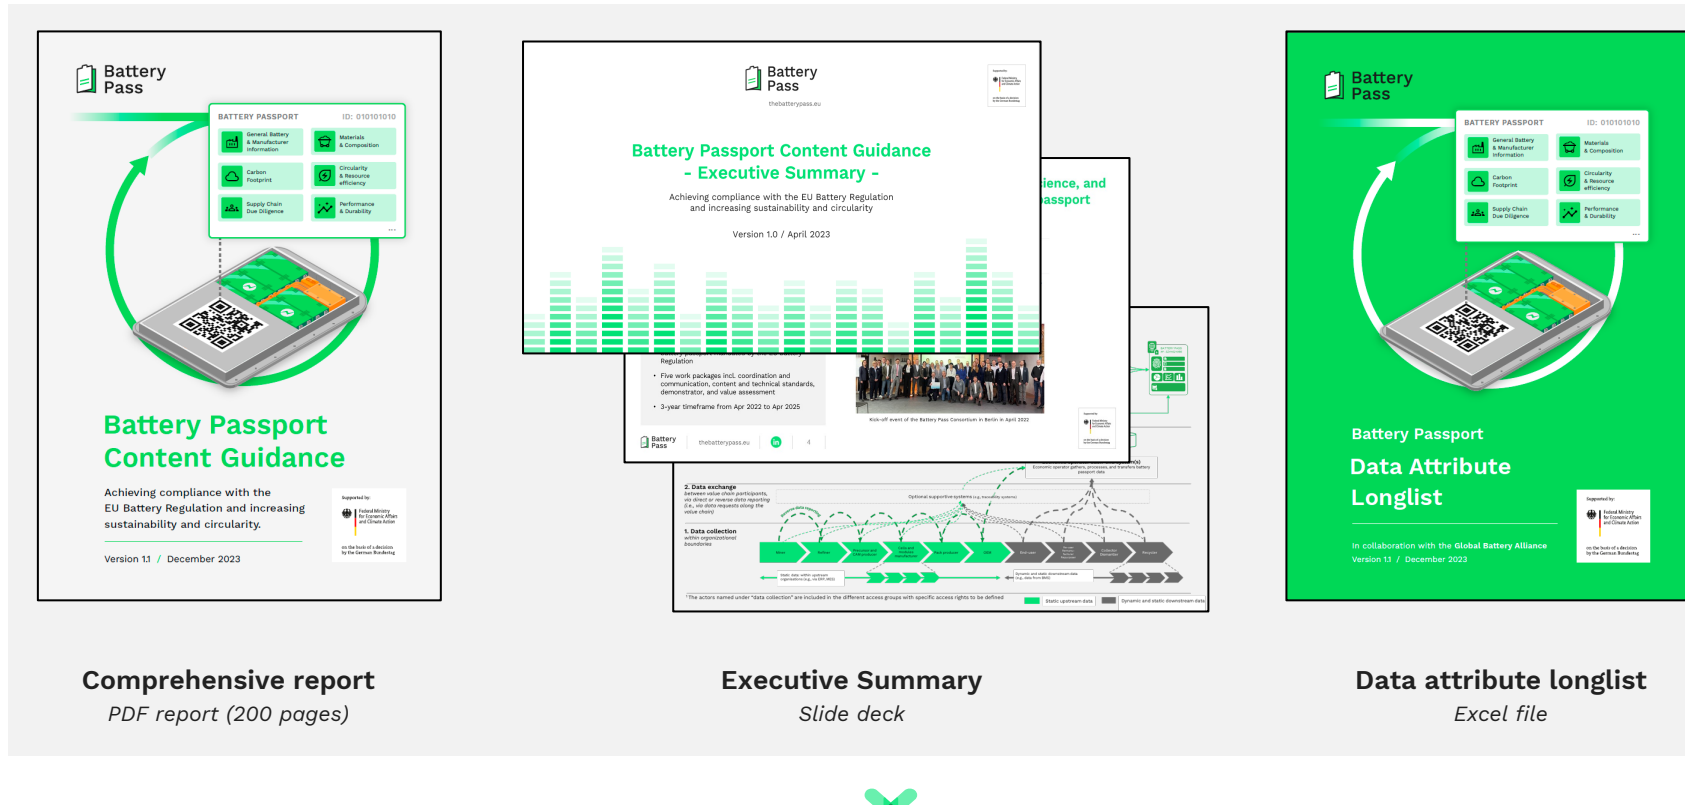

2) Data is gathered, processed and transferred to the product passport by the economic operator

1) Data is collected within organisations and exchanged between value chain players

# The content of the battery passport and all data attributes are explained in the Battery Pass Content Guidance

## In work: DIN DKE SPEC 99100

- Document in **standardisation format** based on previous documents
- **Consortium**: Battery Pass consortium members & further interested stakeholders
- To be finalised by April 2024

## Scope & Goal:

- Focus on battery passport content requirements
- Guidance for companies on how to implement the battery passport

All documents available  
on the Battery Pass website

# Thank you for your interest!
